## **Eureka California Consumer Price Index 2016 Edition**

For our senior capstone project, we updated the ongoing Consumer Price Index for Eureka California, a project of the HSU Department of Economics. We use the same methodology as the Bureau of Labor and Statistics.

The goal of this project was to capture the price levels of Eureka, CA, derive inflation rates and anylize the sectors that make up the index.

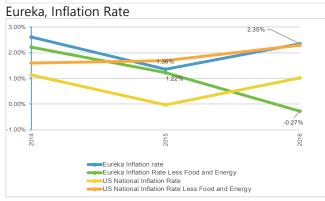

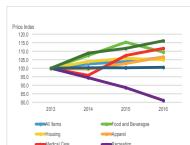

**Consumer Price Index:** To measure the price levels of Eureka, a **basket of goods** that include more than 200 items in it ranging from a gallon of gas to a bottle of wine. The item's price is recorded in the basket of goods. The total price of the basket of goods is derived and is used to measure the price levels of Eureka. The inflation rate is calculated from the changes of the price of the basket.

The Inflation rate for Eureka was 2.35% for 2016. The core inflation rate (Inflation Less Food and Energy) does not include energy or food in the basket of goods because their prices are volatile. The core inflation for 2016 was -0.27%.

## Eureka, Food Price Indexes 210 190 Grains, cereals and bakery products Eggs Fresh fruits and vegetables Sugar and sweets Meats, poultry, fish, and eggs

Egg prices have more than doubled in the last three years. Meats have dropped in price and the other items have remained steady.

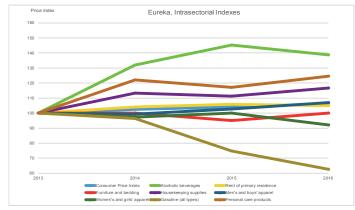

Sectorial Price Indexes

Other Goods and Services and Medical Services increased the

**Weights:** In order to calculate the consumer price index, weights are used to each item of the basket. The percentages are a reflection of the proportions a consumer allocates. The weighting methodology and weights were derived from the Bureau of Labor and statistics website.

Wages were collected from the Bureau of Labor and Statistics.
